Dear Grading Team,

I submitted my Module 3 Challenge on Saturday night, a full day ahead of the deadline, based on these submission instructions.
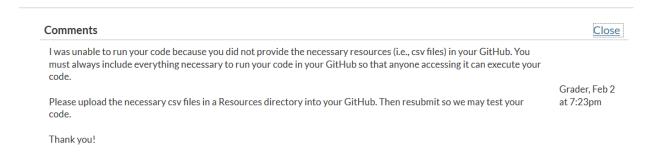

Submission

1. When you've completed the challenge, add `PyPoll_Challenge.py` and the `election_analysis.txt` file to your Election_Analysis GitHub repository.

2. Submit the URL to the GitHub repository on your assignment submission link on Canvas.

Note: You are allowed to miss up to two Challenge assignments and still earn your certificate. If you complete all Challenge assignments, your lowest two grades will be dropped. If you wish to skip this assignment, click Submit then indicate you are skipping by typing "I choose to skip this assignment" in the text box.

Module 3 Rubric

In checking Canvas while at work today, I received the feedback below. I was unable to submit this until I returned home, just a few minutes ago. I hope and trust that I can now provide the *.csv file referenced in your note. It was not referenced in the submission notes.

Comments   Close

I was unable to run your code because you did not provide the necessary resources (i.e., csv files) in your GitHub. You must always include everything necessary to run your code in your GitHub so that anyone accessing it can execute your code.

Please upload the necessary csv files in a Resources directory into your GitHub. Then resubmit so we may test your code.

Thank you!

Please confirm receipt of the additional file, as well as this note, and confirm that I will not be penalized for adhering to the instructions of the Challenge in Module 3. Thank you.
